

EMERGENCY INTERCOM

Bi-directional voice intercom communications

Interalia Systems Corp (formerly Envitech Communication) provides bi-directional voice communication intercom solutions for public transit authorities. It is a flexible tool that offers multiple features including: party-line and priority queuing. When used in tandem with video surveillance, our emergency intercom offers efficient and effective communication between operators, dispatchers and passengers.

- Passenger-to-operator intercom for communication with passengers
- Operator-to-operator intercom for communication between crew members on the train
- Operator-to-dispatcher intercom for communication between crew members and control center personnel

Emergency Intercom features include:

- High-quality audio and wireless communication
- Party-line, priority queuing and call-waiting
- Event recording
- Redundant configuration
- In-service upgrade can be done without disrupting service
- Easily integrated standard communication interface
- Smooth transition from an old to a new system (new cars can use the new system while old cars use the old system)
- Adaptable application layer software supports client specific requirements
- Interoperability with WLAN and MAN IEEE 802.X protocols to facilitate implementation of IP-based remote control of on-board communication systems for driverless applications
- Proven technology
- Certification according to railway IEC standards
